## Amendments to the Claims:

Please amend Claim 1 as indicated in the following listing of claims, which replaces all prior versions, and listings of claims in the application.

## **Listing of Claims:**

container;

1. (Currently Amended) A method of delivering a nebulized fluid for inhalation, comprising the steps of:

providing a nebulizing device, a reservoir and a container, the reservoir and container being adapted for holding volumes of fluid and being replaceable;

delivering a volume of fluid <u>corresponding to a selected dose size</u> from the container to the reservoir;

transferring the volume of fluid from the reservoir to the nebulizing device; using the nebulizing device to nebulize the volume of fluid; repeating the delivering and using steps a number of times with the same

removing and replacing the container; and removing and replacing the reservoir.

2. (Original) The method of claim 1, wherein:

the providing step is carried out with the nebulizing device having a vibrating element with a plurality of holes, the reservoir holding a fluid in contact with the vibrating element.

3. (Previously Presented) The method of claim 1, wherein:

the removing and replacing steps are carried out with the reservoir being mounted to the container by a user which is followed by the user mounting both components together into the nebulizing device.

Appl. No. 10/043,075 Amdt. dated June 11, 2004 Reply to Office Action of March 12, 2004

4. (Original) The method of claim 1, wherein:

the providing step is carried out with reservoir having a needle which penetrates the container thereby providing a fluid path between the container and the reservoir.

5. (Original) The method of claim 1, wherein:

the providing step is carried out with a one-way valve positioned along a fluid path between the container and the reservoir.

6. (Original) The method of claim 5, wherein:

the providing step is carried out with the nebulizing device having a vibrating assembly, the vibrating assembly having a plurality of holes therein; and

the delivering step is carried out with the valve directing the fluid at the vibrating assembly; and

the using step is carried out with the fluid passing through the holes in the vibrating assembly.

- 7. (Original) The method of claim 5, wherein: the delivering step is carried out with the valve delivering a stream of the fluid.
- 8. (Original) The method of claim 7, wherein:
  the delivering step is carried out with the stream of fluid being directed at a vibrating assembly of the nebulizing device.
- 9. (Previously Presented) The method of claim 5, wherein:
  the providing step is carried out with the valve positioned at the end of the fluid
  path so that the valve leads directly into the reservoir.
  - 10. (Original) The method of claim 1, further comprising the step of:

Appl. No. 10/043,075 Amdt. dated June 11, 2004 Reply to Office Action of March 12, 2004

removing a mouthpiece before the removing steps to permit at least one of the reservoir and the container to be removed and replaced.

11. (Original) The method of claim 10, wherein:
the removing steps are carried out with the reservoir and the container being separate units.

12. (Original) The method of claim 11, wherein:
the removing steps are carried out with the reservoir being mounted to the container by the user.

13. - 119. (Canceled).
